

### IMPART SKILL SETS ESSENTIAL FOR THE FUTURE

Identify & build up the inherent strengths of children.. And... Inculcate the Love for Learning..

*The challenges expected to be faced in the future would probably have no prior precedent.*

*We need to equip children with tools TODAY to face unknown situations in the FUTURE.*

Relying only on the traditional way of imparting education (using words & numbers) has been found to be inadequate.

It is becoming increasingly essential to ensure that children are guided to: implement learning techniques ‘in-sync’ with their strengths, take career choices which resonate with their intelligences – so that they are motivated, satisfied & engaged contributors to the economy, when they are ready.

By equipping children with the Love for Learning – at an early age itself would help them comprehend, retain, recall the subjects in their curriculum, become aware of how to increase their creativity etc. so that they enjoy studies.

Mind Maps would help them achieve this easily.

**FRANCHISE PROPOSAL :** For this 2 year long – available for end-users in 4 modules (6 months each)

2 representatives of the Franchisee would be adequately trained to conduct the 40 week, one hour, once a week class for children in the age group of 5 to 7 years.

Strategies to build up each of the eight Intelligences would be done in each module.

Mind Maps would be age appropriate, with the difficulty levels being gradually increased.

*Do internalize, and if you envision yourself being part of our network, passionately interested in making a difference to society, please connect for further discussions after completing your ‘due diligence’ exercise.*
